DevOps – definition (Wikipedia)

DevOps (a clipped compound of "**development**" and "**operations**") is a software engineering **culture and practice** that aims at unifying software development (Dev) and software operation (Ops). The main characteristic of the DevOps movement is to strongly advocate **automation and monitoring** at **all steps** of software construction, from integration, testing, releasing to deployment and infrastructure management.

DevOps aims at shorter development cycles, increased deployment frequency, and more dependable releases, in close alignment with business objectives.

What is DevOps?

Developers & Testers

IT Operations

DevOps – how to start?

- Database in source control
- Build CI process
- Deploy (CD) empty database
- Then add the rests:
 - data,
 - security,
 - Unit tests
 - Integration-test (if required)

What is the SSDT?

- SQL Server Data Tools
- Now, it's a part of Visual Studio
- Free!
- Database project, including:
 - Schema, Stored Procedures, Functions,
 - Tables, Views, Security, CLR
 - ... and much more!

SSDT: How to install?

Workloads

Individual components

Language packs

Installation locations

Web & Cloud (7)

**ASP.NET and web development**
Build web applications using ASP.NET, ASP.NET Core, HTML, JavaScript, and container development tools.☒

**Python development**
Editing, debugging, interactive development and source control for Python.☐

**Data storage and processing**
Connect, develop and test data solutions using SQL Server, Azure Data Lake, Hadoop or Azure ML.☒

**Office/SharePoint development**
Create Office and SharePoint add-ins, SharePoint solutions, and VSTO add-ins using C#, VB, and JavaScript.☒

**Azure development**
Azure SDK, tools, and projects for developing cloud apps and creating resources.☒

**Node.js development**
Build scalable network applications using Node.js, an asynchronous event-driven JavaScript runtime.☐

**Data science and analytical applications**
Languages and tooling for creating data science applications, including Python, R and F#. ☐

Summary

- > Visual Studio core editor
- > Universal Windows Platform development
- > .NET desktop development
- > Mobile development with .NET
- > Office/SharePoint development *
- > Azure development
- > ASP.NET and web development
- > Game development with Unity
- ✓ **Data storage and processing**
 - Optional
 - ✓ SQL Server Data Tools
 - ✓ Azure Data Lake and Stream Analytics Tools
 - ✓ .NET Framework 4 – 4.6 development tools
 - ✓ Redgate ReadyRoll Core
 - ✓ Redgate SQL Prompt Core
 - ✓ Redgate SQL Search
 - ✓ F# language support

DEMO – part 1

- Create GIT repo in Azure DevOps
- Create empty database project
- Import database from server

Tips for 8 weeks

- 1 email / week
- Useful things attached:
 - Cheat sheet
 - Tips
 - Step by step manuals

Tips for 8 weeks

Learn with
SQL Player

Database projects with SQL Server Data Tools (SSDT)

Start your database project like any other component or application. Build, rename, detect bugs, test and publish automatically successfully.

This course will contain 64 videos, quiz on each module and many code examples. Sign up below to receive a few emails (8 weeks, one a week) with free, useful materials.

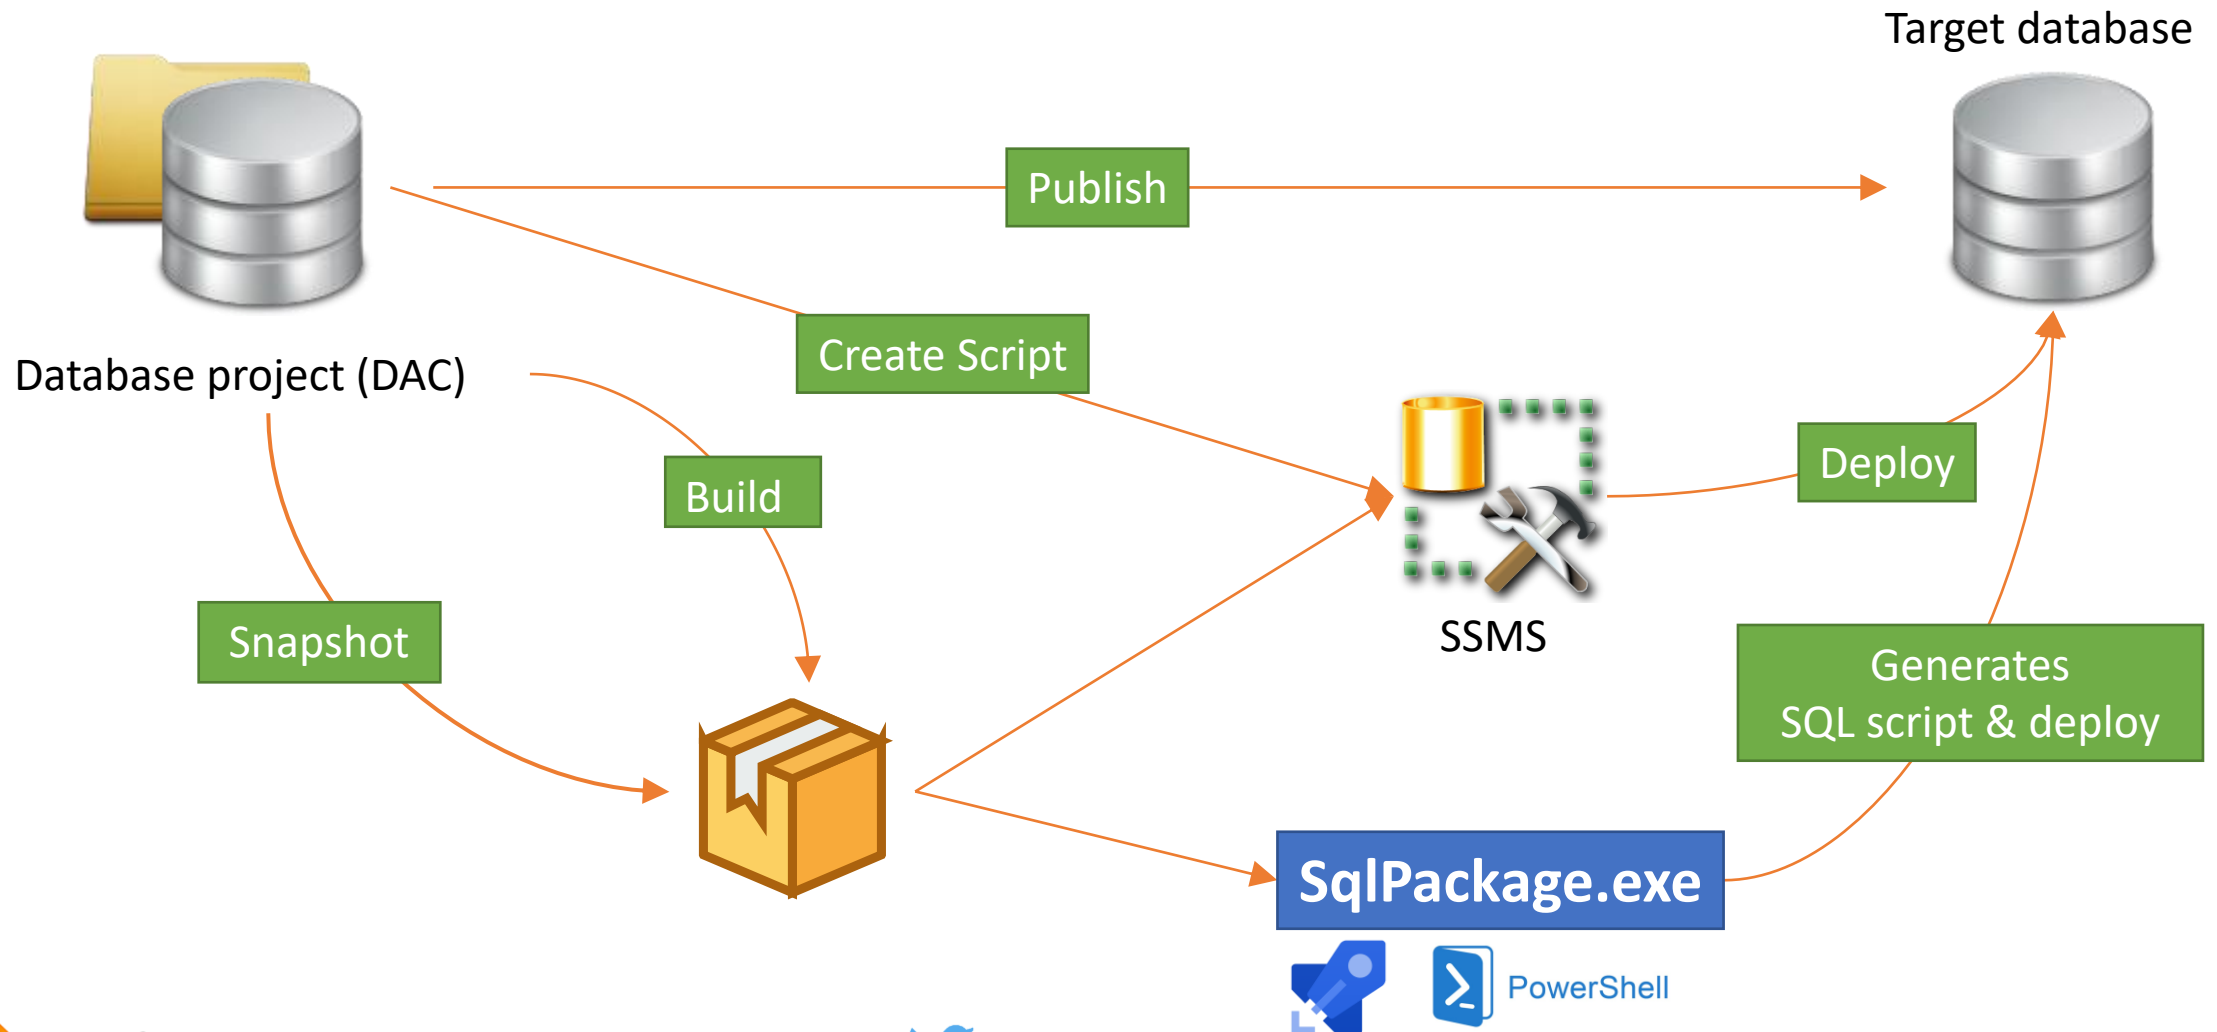

You're signing up to receive emails from Learn with SQLPlayer

DACPAC file usage scenarios

SSDT Deployment Pipeline

- Build database project
 - Generates DACPAC
- SQLPackage compares
 - DACPAC to target database
- SQLPackage generates
 - Migration script
 - Execute script against target server

Azure DevOps

- Build database project
 - Generates DACPAC
- SQLPackage compares
 - DACPAC to target database
- SQLPackage generates
 - Migration script
 - Execute script against target server

DEMO – part 2

- Build (Visual Studio)
- Build Pipeline (Azure DevOps)
- Publish (Visual Studio)
- Release Pipeline (Azure DevOps)

SSDT offers much more...

- Database references
- Variables
- Publish Profiles
- Pre & Post-deployment scripts
